### 2. Professional Information:

#### 2.1. Course description:

The characteristics of the foreign language (English, Deutsch, French, or any foreign language approved by the academic department council and both the faculty and university councils) - Revision of the language grammar – grammar style and effective sentences and their characteristics – Identification of common errors in writing technical sentences – Building basic paragraphs: types of paragraphs, reading and analyzing of excerpts from books in various disciplines to develop communication skills.

#### 2.2. Course Objectives (CO):

The students will be able to:

Program objective		Course objective	
<b>PO4</b>	Master self-learning and life - long learning strategies to communicate effectively in academic/professional fields.	<b>CO1</b>	<b>Use</b> written and oral communication in a range of situation with an emphasis on academic communication.
		<b>CO2</b>	<b>Illustrate</b> the academic terminologies related to their field of specialization

### 2.3. Course Learning Outcomes (CLO's):

Program Learning Outcomes		Course Learning Outcomes	
<b>PLO8</b>	Communicate effectively – graphically, verbally and in writing – with a range of audiences using contemporary tools.	<b>CLO1</b>	<b>Identify</b> the appropriate written and oral communication in different situations in English.
		<b>CLO2</b>	<b>Communicate</b> efficiently to convey ideas verbally.
		<b>CLO3</b>	<b>Discuss</b> the abstract ideas and arguments from a range of texts.
		<b>CLO4</b>	<b>Use</b> vocabulary as a key ingredient in developing advanced written skills.
<b>PLO10</b>	Acquire and apply new knowledge; and practice self, lifelong and other learning strategies.	<b>CLO5</b>	<b>Practice</b> a range of grammatical structures and vocabulary accurately and effectively.

**Differential Calculus:** Real functions and their graphs (Algebraic functions, trigonometric functions and their inverses, exponential, hyperbolic and logarithmic functions). Limits and continuity. Differentiation of real functions of one variable. Applications of differentiation (maxima, minima and inflection points, curve tracing, optimization problems, related rates). The first mean value theorem and first order approximation of function. Taylor, s and Maclaurin’s expansions of functions.

**Algebra:** Elements of mathematical logic with applications, Matrix algebra and system of linear equations (Gauss elimination, Gauss-Gordon elimination and LU Factorization and Matrix inversion). Eigenvalues and Eigenvectors. Complex variables

#### 2.2. Course Objectives (CO):

Program objective		Course objective	
<b>PO1</b>	Apply a wide spectrum of engineering knowledge, science, and specialized skills with analytic, critical, and systemic thinking to identify and solve engineering problems in real-life situations.	<b>CO1</b>	Explain elements of mathematical logic, <b>relations</b> , mappings, real functions and their graphs applications of differentiation, and its applications.

Gases: ideal & real gas laws, kinetic molecular theory - Liquids and solutions - Solids: arrangement of atoms, metallic solids, alloys - Chemical kinetics: reaction rates & order, catalysis – Electrochemistry: electrochemical cells, corrosion– Cements – Polymers – lubricants.

#### 2.2. Course Objectives (CO):

Program objective		Course objective	
PO1	Apply a wide spectrum of engineering knowledge, science, and specialized skills with analytic, critical, and systemic thinking to identify and solve engineering problems in real-life situations.	CO1	Demonstrate knowledge of laboratory safety and to generalize the analytical and quantitative skills gained and apply them in more advanced courses.
		CO2	Recognize the basic fundamentals in engineering chemistry to provide a broad foundation in chemistry that stresses on the concepts of reaction kinetics, redox reaction and understanding polymers, cements, and lubricants,
		CO3	Classify matter and explain the qualitative and quantitative relationships between state of matter and energy involved in chemical or physical processes.

#### 2.3. Course Learning Outcomes (CLO's):

Program Learning Outcomes		Course Learning Outcomes	
PLO1	Identify, formulate, and solve complex engineering problems by applying engineering fundamentals, basic science and mathematics	CLO1	Explain gas laws and differentiate between ideal and real gas behavior.
		CLO2	Recognize the intermolecular forces and solutions colligative properties.

			Familiarizing with basic principal of lubrication and selection of lubricant.
		<b>CLO3</b>	Describe bonding that can be applied to affect the properties of solids. Identify properties of polymers and their characteristics. Specify requirements of clinker, and chemical admixtures used in concrete technology
		<b>CLO4</b>	Identify reaction order to determine rate law. Recognize different factors affecting on it.
PLO2	Develop and conduct appropriate experimentation and/or simulation, analyze and interpret data, assess and evaluate findings, and use statistical analyses and objective engineering judgment to draw conclusions.	<b>CLO5</b>	Recognize redox reactions and different types of electrochemical cells. Make stoichiometric calculations for electrolytic processes Recognize corrosion and basic principles to control.
		<b>CLO6</b>	Perform laboratory experiments correctly using appropriate techniques and safety procedures and communicate the results of their experiments via written laboratory reports

#### 2.1. Course Description:

Introduction to Computer Aided Drafting, history, advantages, and limitation. Graphics/CAD involves the visualization, sketching, and geometric construction of mechanical components. Layout and creation 2D working industrial drawings that adhere to industry standards. Illustrate CAD drawing construction techniques, implementation of graphical communication through the use of the alphabet of lines, orthographic projection, section views, auxiliary views and the creation of assembly and detail mechanical components

#### 2.2. Course Objectives (CO):

Program objective		Course objective	
<b>PO 4</b>	Use techniques, skills, and modern engineering tools necessary for engineering practice.	<b>CO 1</b>	create accurate and detailed engineering drawings using software

#### 2.3. Course Learning Outcomes (CLO's):

Program Learning Outcomes		Course Learning Outcomes	
<b>PLO 4</b>	Utilize contemporary technologies, codes of practice and standards, quality guidelines, health and safety requirements,	<b>CLO1</b>	Identify the capabilities of computer-aided drawing techniques
		<b>CLO2</b>	Apply basic CAD concepts to develop and construct accurate 2D geometry through the

	environmental issues, and risk management principles		creation of basic geometric constructions.
<b>PLO8</b>	Communicate effectively – graphically, verbally and in writing – with a range of audiences using contemporary tools.	<b>CLO3</b>	Communicate graphically with the colleagues in the lab.

### 2. Professional Information:

#### 2.1. Course description:

Types of tests and Testing machine - Behavior of Engineering Materials under Static Tension Load - Behavior of Engineering Materials under Static Compression Load - Behavior of Engineering Materials under Static Bending Load - Behavior of Engineering Materials under Static Shear Forces - Behavior of Engineering Materials under Static Torsion Load - Behavior of Engineering Materials under Impact Load.

#### 2.2. Course Objectives (CO):

Program objective		Course objective	
<b>PO1</b>	Apply a wide spectrum of engineering knowledge, science and specialized skills with analytic, critical and systemic thinking to identify and solve engineering problems in real life situation.	<b>CO1</b>	<b>Apply</b> the necessary tests on different types of materials and how to test them.
		<b>CO2</b>	<b>Design</b> of Engineering structural items under different types of static forces.

#### 2.3. Course Learning Outcomes (CLO's):

Program Learning Outcomes		Course Learning Outcomes	
<b>PLO2</b>	Develop and conduct appropriate experimentation and/or simulation, analyze and interpret data, assess, and evaluate findings, and use statistical analyses and objective engineering judgment to draw conclusions.	<b>CLO1</b>	<b>Explain</b> different types of testing machines, strain gauge devices, mechanical properties and behavior of engineering materials
		<b>CLO2</b>	<b>Apply</b> testing methods to determine mechanical properties of engineering materials, and quality control procedures.

<b>PLO11</b>	Select appropriate and sustainable technologies for construction of buildings, infrastructures, and water structures; using either numerical techniques or physical measurements and/or testing by applying a full range of civil engineering concepts and techniques of: Structural Analysis and Mechanics, Properties and Strength of Materials, Surveying, Soil Mechanics, Hydrology and Fluid Mechanics.	<b>CLO3</b>	<b>Select</b> necessary tests and engineering materials according to required specification.
		<b>CLO4</b>	<b>Analyze</b> Properties and Strength of Materials.

### 2. Professional Information:

#### 2.1. Course description:

This course aims to provide an introduction of equilibrium chemistry principles in aquatic systems. This course is designed for engineering students who are often required to understand the composition of solutions and direction of changes during treatment or in environmental systems. By completion of the course, the student will be able to interpret and communicate results related to water quality. Therefore the course syllabus includes the following topics: equilibrium principles of acids-bases, dissolution-precipitation, titration, gas-liquid equilibrium, oxidation-reduction, complexation and water quality analysis and quality control.

#### 2.2. Course Objectives (CO):

Program objective		Course objective	
<b>PO1</b>	Apply a wide spectrum of engineering knowledge, science, and specialized skills with analytic, critical, and systemic thinking to identify and solve engineering problems in real-life situations.	<b>CO1</b>	Predict acid and base behavior in aquatic systems.
<b>PO4</b>	Use techniques, skills, and modern engineering tools necessary for engineering practice.	<b>CO2</b>	Perform water quality analyses and interpret the results necessary for engineering practice.

### 2.3. Course Learning Outcomes (CLO's):

Program Learning Outcomes		Course Learning Outcomes	
<b>PLO1</b>	Identify, formulate, and solve complex engineering problems by applying engineering fundamentals, basic science, and applied mathematics.	<b>CLO1</b>	Discuss acid and base reactions, precipitation /dissolution and complexing
		<b>CLO2</b>	Illustrate the carbonate buffer system, and the impact for aquatic chemistry in general
<b>PLO2</b>	Develop and conduct appropriate experimentation and/or simulation, analyze and interpret data, assess and evaluate findings, and use statistical analyses and objective engineering judgment to draw conclusions	<b>CLO3</b>	Use the basic analytical methods in water chemistry.
<b>PLO4</b>	Utilize contemporary technologies, codes of practice and standards, quality guidelines, health and safety requirements, environmental issues and risk management principles.	<b>CLO4</b>	Explain the effects of speciation on availability and toxicity of selected ions

#### 2.1. Course Description:

Probability: Obtaining Data - Probability models: mathematical, deterministic model. Probability theory concepts. - Discrete Distributions: Binomial and Poisson distribution. Continuous Distributions: Normal and Exponential Distribution. - Joint distributions. Statistics and Estimation: central point theorem, Single and multiple confidence interval, Prediction interval, tolerance interval - Hypothesis testing, - Inferences on the mean and variance of Normal distribution, Inference of two samples. – Simple and multiple Linear Regression and Correlation. - Applications involving uniform, Gaussian. Markov chains - Queueing Theory - Course examples are drawn from signal processing, system reliability, data science, wireless communications, civil engineering, and mechanical engineering - Lab simulations of engineering applications.

#### 2.2. Course Objectives (CO):

Program objective		Course objective	
<b>PO1</b>	Apply a wide spectrum of engineering knowledge, science, and specialized skills with analytic, critical, and systemic thinking to identify and solve engineering problems in real-life situations.	<b>CO1</b>	<b>List and Explain</b> basic Theorems of Probability, and their applications in engineering life.
		<b>CO2</b>	<b>Select</b> a suitable item to evaluate applied probability problems in <b>real-life situations</b>

### 2.3. Course Learning Outcomes (CLO's):

Program Learning Outcomes		Course Learning Outcomes	
<b>PLO1</b>	Identify, formulate, and solve complex engineering problems by applying engineering fundamentals, basic science, and applied mathematics.	<b>CLO1</b>	<b>Identify</b> the basic items of the course.
		<b>CLO2</b>	<b>Explain</b> how to use all items of the course in applied engineering problems
<b>PLO2</b>	Develop and conduct appropriate experimentation and/or simulation, analyze and interpret data, assess and evaluate findings, and use statistical analyses and objective engineering judgment to draw conclusions	<b>CLO3</b>	<b>Solve</b> different problems for various mathematics elements
		<b>CLO4</b>	<b>Analyze</b> the different problems and verifications.

### 2. Professional Information:

#### 2.1. Course description:

The course focuses on the relation between building materials and the related adequate construction systems. Students study the basic elements of the building (roofs - floors - walls) and understand. The architectural and services elements of buildings (Function - Finishes - Building materials - Stairs - Elevators). This course provides the students with the fundamental skills and understanding the architectural drawings (Axes - Interior and exterior dimensions - Finishes tables...).

#### 2.2. Course Objectives (CO):

Program objective		Course objective	
<b>PO1</b>	Apply a wide spectrum of engineering knowledge, science and specialized skills with analytic, critical and systemic thinking to identify and solve engineering problems in real life situation.	<b>CO1</b>	Outline the architectural vocabulary and drawings which used in architectural drawings.
		<b>CO2</b>	Produce the architectural drawings of small projects in form of different architectural projections.

### 2.3. Course Learning Outcomes (CLO's):

Program Learning Outcomes		Course Learning Outcomes	
<b>PLO 8</b>	Communicate effectively – graphically, verbally and in writing – with a range of audiences using contemporary tools.	<b>CLO1</b>	Discuss effectively simple architectural drawings.
<b>PLO9</b>	Use creative, innovative and flexible thinking and acquire entrepreneurial and leadership skills to anticipate and respond to new situations.	<b>CLO2</b>	Recognize the building components and materials of small architectural projects.
		<b>CLO3</b>	Generate manual architectural drawings for small projects through imagination and creativity.

### 2. Professional Information:

#### 2.1. Course description:

Introduction to Geotechnical Engineering - Definitions and Relationships - Index Properties of Soil - Soil Classification Systems (Unified – British) - Permeability and Seepage of Soil (Darcy's Law - Capillarity in Soils - Flow Net Analysis) - Stress Distribution in Soil (Point load – Uniform Load (Newmark – Fadum - Approximation)) - Shear Strength of Soil (Direct Shear Box - Triaxial– Unconfined Compression) - Lateral Earth Pressure (Active and Passive) - Soil Compaction (Standard Proctor - Modified Proctor)..

#### 2.2. Course Objectives (CO):

Program objective		Course objective	
<b>PO1</b>	Apply a wide spectrum of engineering knowledge, science and specialized skills with analytic, critical and systemic thinking to identify and solve engineering problems in real life situation	<b>CO1</b>	Illustrate the fundamental understanding of the nature and properties of soil and its different types and study the effect of water on its behavior in different situations, through the application of engineering principles and skills and laboratory experiments.
		<b>CO2</b>	Evaluate the laws and engineering sciences learned through understanding the behavior of soil and the use of analytical and critical thinking to solve the surrounding realistic engineering problems and study the soil-structure interaction to reach the best design conditions.

### 2.3. Course Learning Outcomes (CLO's):

Program Learning Outcomes		Course Learning Outcomes	
<b>PLO2</b>	Develop and conduct appropriate experimentation and/or simulation, analyze and interpret data, assess, and evaluate findings, and use statistical analyses and objective engineering judgment to draw conclusions.	<b>CLO1</b>	Analyze the index properties of soils and soil classification of the different types of soils.
		<b>CLO2</b>	Determine the soil permeability coefficient due to variable permeability tests. and maximum dry density of soil corresponding to the optimum moisture content through compaction tests.
<b>PLO5</b>	Practice research techniques and methods of investigation as an inherent part of learning.	<b>CLO3</b>	Investigate on the soil shear parameters due to variable shear tests.
		<b>CLO4</b>	Practice research techniques for water in the soil and the flow nets.
<b>PLO11</b>	Select appropriate and sustainable technologies for construction of buildings, infrastructures and water structures; using either numerical techniques or physical measurements and/or testing by applying a full range of civil engineering concepts and techniques of: Structural Analysis and Mechanics, Properties and Strength of Materials, Surveying, Soil Mechanics, Hydrology and Fluid Mechanics.	<b>CLO5</b>	Evaluate the variable soil parameters according to the knowledge of soil properties and classifications.
		<b>CLO6</b>	Evaluate the lateral earth pressure and stresses on soil due to different loads.

<b>PO2</b>	Behave professionally and adhere to engineering ethics and standards and work to develop the profession and the community and promote sustainability principles.	<b>CO1</b>	Use structural analysis principles to get critical cases for design steel element.
<b>PO6</b>	Design of constructions that meet specified needs with appropriate attention to health and safety risks, applicable standards, economic, environmental, cultural, and societal considerations.	<b>CO2</b>	Design steel elements according to standard codes.

### 2.3. Course Learning Outcomes (CLO's):

Program Learning Outcomes		Course Learning Outcomes	
<b>PLO3</b>	Apply engineering design processes to produce cost-effective solutions that meet specified needs with consideration for global, cultural, social, economic, environmental, ethical, and other aspects as appropriate to the discipline and within the principles and contexts of sustainable design and development.	<b>CLO1</b>	Use specified consideration to plan steel structures.
		<b>CLO2</b>	Apply different loads and structural analysis of steel structures.
<b>PLO4</b>	Utilize contemporary technologies, codes of practice and standards, quality guidelines, health and safety requirements, environmental issues, and risk management principles.	<b>CLO3</b>	Utilize codes of practice and standards of steel structures to check the allowable stresses.
		<b>CLO4</b>	Utilize codes of practice and standards of steel structures to check safety requirements (serviceability and deflection).
<b>PLO12</b>	Achieve an optimum design of Reinforced Concrete and Steel Structures, Foundations and Earth Retaining Structures; and at least three of the following civil engineering topics: Transportation and Traffic, Roadways and Airports, Railways, Sanitary Works, Irrigation, Water Resources and Harbors; or any other emerging field relevant to the discipline.	<b>CLO5</b>	Calculate critical straining actions for steel elements.

### 2. Professional Information:

#### 2.1. Course description:

Soil Consolidation and Settlement (Soil Consolidation Theory - Primary and Secondary Settlement - Oedometer Test) - Bearing Capacity of Soil (Terzaghi Eq. - Mayerhof Eq. – Egyptian Code Eq.) - Shallow Foundations (Construction Considerations – Design Considerations) - Design of Isolated Footings (Square and Rectangular Footings – Footing with Moment) - Design of Strip Footings - Design of Combined Footings - Design of Strap Beam Footings - Design of Rafts ( Conventional Method – Ribbed Raft).

#### 2.2. Course Objectives (CO):

Program objective		Course objective	
<b>PO1</b>	Apply a wide spectrum of engineering knowledge, science, and specialized skills with analytic, critical, and systemic thinking to identify and solve engineering problems in real-life situations.	<b>CO1</b>	Evaluate the soil settlement due to compressibility resulting from different loads over time by simulating that in laboratory experiments by finding different consolidation parameters by applying engineering principles.
<b>PO6</b>	Design of constructions that meet specified needs with appropriate attention to health and safety risks, applicable standards, economic, environmental, cultural, and societal considerations.	<b>CO2</b>	Design the different types of shallow foundations taking into consideration the soil bearing capacity and settlement to choose an appropriate type of foundation that is appropriate to safety standards considering economic and societal factors.

### 2.3. Course Learning Outcomes (CLO's):

Program Learning Outcomes		Course Learning Outcomes	
<b>PLO 3</b>	Apply engineering design processes to produce cost-effective solutions that meet specified needs with consideration for global, cultural, social, economic, environmental, ethical, and other aspects as appropriate to the discipline and within the principles and contexts of sustainable design and development.	<b>CLO1</b>	Calculate the bearing capacity of soil for the shallow foundation.
		<b>CLO2</b>	Explain the construction and design considerations for shallow and deep foundations to produce cost-effective solutions.
<b>PLO 11</b>	Select appropriate and sustainable technologies for construction of buildings, infrastructures and water structures; using either numerical techniques or physical measurements and/or testing by applying a full range of civil engineering concepts and techniques of: Structural Analysis and Mechanics, Properties and Strength of Materials, Surveying, Soil Mechanics, Hydrology and Fluid Mechanics.	<b>CLO3</b>	Determine the soil consolidation parameters for estimating the settlement value.
		<b>CLO4</b>	Evaluate the soil settlement by studying the soil compressibility and compaction.
<b>PLO 12</b>	Achieve an optimum design of Reinforced Concrete and Steel Structures, Foundations and Earth Retaining Structures; and at least three of the following civil engineering topics: Transportation and Traffic, Roadways and Airports, Railways, Sanitary Works, Irrigation, Water Resources and Harbors; or any other emerging field relevant to the discipline.	<b>CLO5</b>	Design the isolated footings and strip footings.
		<b>CLO6</b>	Design of combined footings and strap footings and rafts.

**Transportation Planning:** Introduction to transportation planning - Transportation problem definition and defining study area - Data collection (Origin and destination studies) - Travel forecast (Trip generation - Trip distribution - Modal split - traffic assignment) - Transportation evaluation.

**Traffic Engineering:** Introduction (Human characteristics and vehicle characteristics) - Traffic volume - Traffic speed - Traffic density – Travel time and delay studies - Traffic flow characteristics - Highway capacity (Two-lane highway) – Parking studies - Traffic control devices – Intersections control (Conflict points at intersections, Types of intersection control) - Traffic signals design - Weaving for intersections, freeways, and expressways.

#### 2.2. Course Objectives (CO):

Program objective		Course objective	
<b>PO5</b>	Master self-learning and life-long learning strategies to communicate effectively in academic/professional fields.	<b>CO1</b>	Evaluate transportation planning process with respect to design, financing, regulations and policies, environmental related issues, land use and contemporary issues.
<b>PO6</b>	Design of constructions that meet specified needs with appropriate attention to health and safety risks, applicable standards, economic, environmental, cultural, and societal considerations.	<b>CO2</b>	Design traffic signal, plan parking area, and evaluate traffic operation

### 2.3. Course Learning Outcomes (CLO's):

Program Learning Outcomes		Course Learning Outcomes	
<b>PLO5</b>	Practice research techniques and methods of investigation as an inherent part of learning.	<b>CLO1</b>	Describe study area and the methods of data surveying required for transportation planning.
		<b>CLO2</b>	Discuss transportation project
<b>PLO13</b>	Plan and manage construction processes; address construction defects, instability and quality issues; maintain safety measures in construction and materials; and assess environmental impacts of projects.	<b>CLO3</b>	Calculate Human characteristics and vehicle characteristics
		<b>CLO4</b>	Collect traffic data
		<b>CLO5</b>	Analyze traffic data
		<b>CLO6</b>	Analyze traffic flow characteristics & highway capacity
<b>PLO12</b>	Achieve an optimum design of Reinforced Concrete and Steel Structures, Foundations and Earth Retaining Structures; and at least three of the following civil engineering topics: Transportation and Traffic, Roadways and Airports, Railways, Sanitary Works, Irrigation, Water Resources and Harbors; or any other emerging field relevant to the discipline.	<b>CLO7</b>	Plan parking area
		<b>CLO8</b>	Design of traffic signal

### 2.4. Course Topics:

Course Topics	Week	Course LO's Covered							
		CLO1	CLO2	CLO3	CLO4	CLO5	CLO6	CLO7	CLO8
Introduction to transportation planning	1	√							
Travel forecast (Trip generation - Trip distribution - Modal split - traffic assignment)	2		√						
	3		√						
Transportation evaluation	4	√		√					
Human characteristics and vehicle characteristics	5			√	√				
Traffic data collection	6				√	√			

<b>Midterm Exam</b>	<b>7</b>								
Traffic data analyzing	<b>8</b>					√			
Traffic flow characteristics	<b>9</b>						√		
Highway capacity	<b>10</b>						√	√	
Parking studies	<b>11</b>							√	
Intersections control	<b>12</b>								√
Traffic signals design	<b>13</b>								√
Weaving for intersections	<b>14</b>								√
<b>Practical Exam</b>	<b>15</b>								
<b>Final Exam</b>	<b>16</b>								
<b>Total</b>	<b>13</b>	<b>2</b>	<b>2</b>	<b>2</b>	<b>2</b>	<b>2</b>	<b>2</b>	<b>2</b>	<b>3</b>

## 2.5. Lab Topics:

Lab Topics	Week	Course LO's Covered							
		CLO1	CLO2	CLO3	CLO4	CLO5	CLO6	CLO7	CLO8
Traffic data collection	<b>9</b>					√			
	<b>10</b>					√			
	<b>11</b>					√			
<b>Total</b>						<b>3</b>			

## 2.6 Teaching and Learning Methods

Teaching and Learning Methods:	Course LO's Covered							
	CLO1	CLO2	CLO3	CLO4	CLO5	CLO6	CLO7	CLO8
1. Lecture			√	√	√	√	√	√
2. Tutorials			√	√		√	√	√
3. Practical-based Learning					√			
4. Report	√	√						
<b>Teaching and Learning Methods for Students with Special Needs:</b>								
<b>Methods</b>								
Discussion Session								
Extra Lectures								
Provide different levels of books and materials								

## 2.7 Assessment Methods

Assessment Methods:		Course LOs Covered							
		CLO1	CLO2	CLO3	CLO4	CLO5	CLO6	CLO7	CLO8
<b>Formative Assessment Method</b>									
Tests	Midterm Exam			√	√				
	Experimental Test					√			
	Oral Test	√	√			√			
Assignments				√	√		√	√	√
Report		√	√						
<b>Summative Assessment Method</b>									
Final Exam		√	√				√	√	√

### 2.7.1. Assessment Schedule & Grades Distribution

Assessment Method	Week	Weighting of Asses.
Oral exam	15	10
Discussion	15	10
Assignments	2to 12	10
Midterm exam	7	30
Final exam	16 and above	40
<b>Total</b>		<b>100 marks</b>
